Dual Laser Sighting Bracket

Operator's Guide

**WARNING**

Do not aim laser directly or indirectly (via reflections) into eyes!

**Using the Laser Sighting Bracket**

1. Attach the bracket to a surface via the two mounting holes. See Data Sheet for dimensions.
2. Insert the sensor into the mounting hole and secure it with its mounting nut.
3. Connect a power supply cable to the screw terminals in the electronics module.
4. Connect the power supply and switch on the lasers.
5. Adjust the angle of the bracket to aim the sensor. The centre of the sensor's measurement area is halfway between the two laser points.

**Note:** The size of the measurement area depends on the sensor's optics and the measurement distance. Consult the sensor's Operator's Guide to determine the size of the measured spot.
